### English:

#### Who is concerned:?

**All customers** of the MINOX DTC 1000, who use the **MINOX-Server as indicated in the manual.**

(NOT concerned: customers using the DTC 1000 with the „Simple SIM“.

NOT concerned: customers using the DTC 1000 with their own server.)

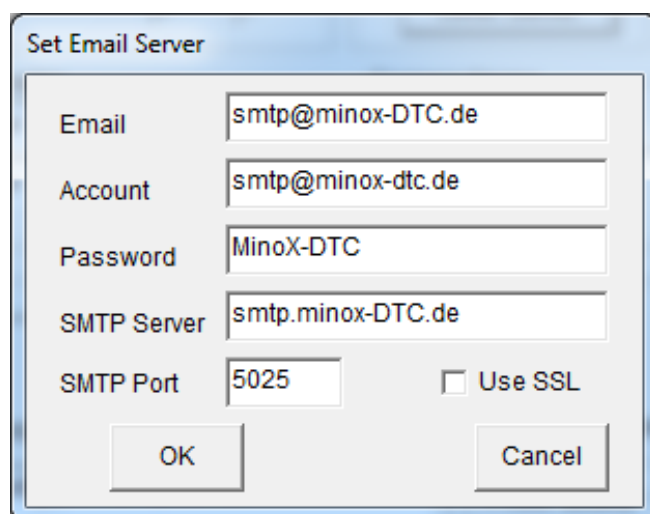

Dear MINOX-customer,

In order to further enhance the privacy and data security of our customers our company has decided to switch all data transmission to a new firewall-protected server with enhanced security.

We kindly ask you to re-install your DTC 1000 according to this instruction for further use of the field camera.

In general please follow the instructions as provided in the manual (p. 61-73).

- 1) Save the Download-Tool on a freshly reformatted SD-card
- 2) Open the Download-Tool on a PC and choose Country / Provider from the list if your provider is included. If your provider is not included please choose country “other” and Operator “other”. This will allow you to make custom settings for the specific APN settings of your operator.
- 3) Under “Recipients” enter your e-mail address
- 4) Different from the “old”, i.e. printed manual please enter the following GPRS settings → Sending mail

The screenshot shows a dialog box titled "Set Email Server". It contains the following fields and values:

Email	smtp@minox-DTC.de
Account	smtp@minox-dtc.de
Password	MinoX-DTC
SMTP Server	smtp.minox-DTC.de
SMTP Port	5025
Use SSL	<input type="checkbox"/>

At the bottom of the dialog box, there are two buttons: "OK" and "Cancel".

(→ Please note: Both the SMTP Port and the SMTP Server data has changed from the previous setting.)

We apologize for any inconvenience caused by the server adjustments, but we are confident that the increased security should further your overall satisfaction with the MINOX DTC 1000.
